React & Netlify

Deploy React App to Netlify

Purwadhika
Startup and Coding School

netlify

Netlify is an all-in-one platform for deploying and automating modern web projects. Simply push and it will provides everything: servers, CDN, continuous delivery, HTTPS, staging environments, prerendering, asset post processing, DNS, and more. Any project, big or small, can perform instantly on a global scale.

First, sign up to *www.netlify.com*

Selamat Datang!

Tes deploy React app di Netlify

#1 Create/Prepare Your React App

- Install create-react-app utility globally on your PC (if you have not done yet before)

```
$ npm install -g create-react-app
```

- Create a new react app or prepare yours

```
$ create-react-app linsip
$ cd linsip
```

- Make sure that it runs successfully

```
$ npm run build
```

#2 Deploy to Netlify

- Install netlify-cli globally on your PC

```
$ npm install -g netlify-cli
```

- Deploy it!

```
$ netlify deploy
```

```
? No site id specified, create a new site? Yes
? Path to deploy? (current dir) ./build

Deploy is live (permalink):
  http://5a83977d0b79b768362fc98c.nifty-goldstine-e00a67.netlify.com
```

- Done!
